Abstract:

The existence of coronavirus at the end of 2019 has crossed the country's boundaries and spread the waves to the people, mobile and interdependent global country's population. The socio-economic impact of coronavirus in the low and middle countries mentioned the virus as SARS-CoV-2 has officially termed COVID-19. There is a need to identify the problems faced, barriers and frame the strategies for socio-economic interventions in the COVID-19 pandemic. To manage the people infected with the COVID-19, there is a need for coordination between the health system and the awareness general public. Also, there is a need for support from the financial system and welfare in people's life. During This pandemic situation is an alarming humanitarian crisis that seeks intensive care and support from public health. It is not possible only from the health sector and government, but also social workers, psychologists, experts in logistics, epidemiologists, and social scientists. Countries are implementing the lockdown and hygiene measures to cut the chain of spreading of the virus. Rapid transmission of COVID-19 in countries and the world needs a disease surveillance system, tracking, testing laboratories, and response treatment. In these circumstances, this research paper mainly concentrates on the COVID-19 and its impact on selected rural areas of Tumkur taluk in Tumkur district of Karnataka. It is a socially and timely relevant one and need of the hour.
